

## **Rubeola (measles) virus antigen (inactive) Meridian Life Science 7604**

### **Background**

The measles virus antigen is prepared from Vero cell cultured measles virus. The particles have been inactivated (chemically inactivated, passed infectivity testing) and is therefore non-infectious.

### **Risk considerations**

There are no biological risks associated with this material as it has passed infectivity testing.

### **Exposure risk**

There is no risk of infection from exposure to this material. It is recommended to wear proper PPE (lab coat, gloves, goggles/glasses) when handling this material.

### **Decontamination**

Wipe down all work surfaces with 70% ethanol.

**Tentative assessment: BIOSAFETY LEVEL I**
